

FAVORITE COZY NOOKS ARE HOT SPOTS FOR FLEAS.

Fleas can carry diseases, transmit tapeworms and cause flea allergy dermatitis — the most common allergic skin disease of cats. If an infestation is bad enough, it can even cause anemia, which can be fatal to kittens.

PARADEFENSE FOR CATS

ParaDefense for Cats

This once-a-month topical flea prevention and treatment is specifically formulated for the feline family. Safe to use on cats and kittens at least 8 weeks and older. ParaDefense for Cats kills both flea eggs and adult fleas after contact – no bite necessary. The results? Within 12 hours, fleas will have been eliminated AND your cat remains flea free for up to one month after use. Available exclusively at your veterinary clinic.

FREE YOUR FAMILY FELINES FROM FLEAS.

Effectively stop the flea life cycle in its tracks with ParaDefense for Cats. This preventative solution eliminates both the adults AND eggs, which is crucial to avoiding an infestation.

FLEAS.

Fleas are present year-round, even in colder climates. Fleas love the warmth of your home in winter as much as you do. One adult flea can lay up to 50 eggs per day.

EGGS.

Eggs fall onto your carpet and furniture, where they will hatch and find your feline family.

LARVAE.

Immature stages remain dormant in carpeting, bedding, baseboards, and other areas until conditions are appropriate for development.

PUPAE.

Pupae live within silk-like cocoons. They can live for up to 12 months before emerging to impact your home and cats.

HOW TO APPLY.

- 1 Remove one applicator tube from the package.
- 2 Hold applicator tube in an upright position facing away from you and your pet's face and eyes. Pull cap off tube.
- 3 Turn the cap around and place other end of cap back on tube.
- 4 Twist cap to break seal, then remove cap from tube.

- 5 Part the hair on the neck at the base of the skull until the skin is visible. Place the tip of the tube on the skin and squeeze the tube to expel the entire contents directly on the skin. Do not get this product in your pet's eyes, or allow your pet to ingest this product. The product is bitter tasting and salivation may occur for a short time if the pet licks the product immediately after treatment. Treatment at the base of the skull will minimize the opportunity for the cat to lick the product. Do not allow the product to run off.

- 6 Discard empty tube as described in the Storage and Disposal section.

Under normal conditions this product is effective for a month. However, in case of severe flea infestation, retreatment may be necessary earlier than four (4) weeks. On cats, do not retreat more often than once every seven (7) days. After flea control is attained, return to a monthly treatment schedule.
